

# How to edit Orbit

You don't need code. If you can fill in a form, you can improve a guide.

## 1 Your access

You **directly edit your own market's guide** (e.g. Indonesia). On other markets you can **suggest edits** — they go to that market's editor to approve.

## 2 Start editing

Open a guide, click "**Edit section**". You edit **in place** — no markdown, no code.

Help is built in: a "Show me how" guided tour, plus a "?" tip on every block.

## 3 The building blocks

Add any with "+ Block":

- Steps
- Callout (Tip / Warning)
- Cost (live local rate)
- Method tabs
- Collapsible
- TL;DR
- Prerequisites
- FAQ
- Image (add a screenshot)
- Video (embed a short tutorial)
- Get the Card (your referral link)

## 4 Arrange sections

**Move up/down, add, or delete** — everything's reversible. Undo + History → Revert.

Nothing is ever truly lost — don't be afraid of the buttons.

## 5 Save

Hit save → **Published**. Your edit goes **live** and is **credited to you**.

## 6 Write with AI · optional

You **shape the request first** — then repeat to keep improving.

- Tell us what's wrong, what to change & any facts to use → We build the prompt for you →
- Paste it into your own AI (ChatGPT, Claude...) → Paste the result back → Accept or reject the changes → Refine again

## 7 Keep it true

**Accurate beats polished.** Confirm facts in the Jupiter app. Keep "**last updated**" fresh.

Independent + community-made — for smart, savvy people who want to maximise the value of their money.

## 8 Stuck?

Use the chat bubble (**Rachel**) bottom-right — a real person will help.
